Warning: GitGuardian detected an API key from Google

Hello @paulomcnally

GitGuardian detected an API key from Google in the following [commit](#) from [js-ni/ni](#) pushed at 2019-05-14T05:30:22Z.

GitGuardian, or "GG", is a "Good Guy" bot scanning in real time GitHub commits for sensitive information.

Once you have pushed sensitive information to GitHub, this information is public and should be considered compromised. We just open sourced our [GitHub repository](#) to help developers take appropriate actions. Would love a star! :)

Accidents happened to the best of us and will continue to happen. **Sign up** to our service to **be notified if this happens again**. We got a **free tier** for individual developers !

A green rectangular button with rounded corners and a white border, containing the text "Stay Safe" in a bold, sans-serif font.

Privacy matters a lot to us. When you sign up to our service, we require permissions affecting only your **public repositories**.

GitGuardian needs you !

Our Machine Learning algorithms can only get better with your feedback. Please help us improve our service by clicking on the blue button if we are correct and on the red button if we made a mistake.

[Unsubscribe](#) from these alerts if you are unhappy.
